What to Plant and When to Plant It

(AS APPLIES TO THE PECOS VALLEY OF NEW MEXICO)

JANUARY—After making out a list of all seeds you wish to plant, mail it to the Roswell Seed Co., with full shipping directions. Of course, you want the best at reasonable prices and we will be pleased to furnish you.

Prepare hot beds for early Cauliflower, cabbage, egg plant, lettuce, onions, pepper and tomatoes.

FEBRUARY—Your hot beds should be planted this month. Plant onion seed and sets, carrots, extra early peas, parsley, pie plant, asparagus and horse radish early in the month. Early potatoes about the 15th.

MARCH—Plant oats, corn, peas, both early and second early. Bed out sweet potatoes in hotbeds. Plant early tomatoes in hotbeds early this month, also pepper and egg plant. Plant onions, lettuce, radishes, mustard, leek, parsley, spinach, parsnips, salsify and stock beets.

APRIL—Plant celery, turnips, okra, peas, corn, lettuce, radishes, so as to have a succession. Plant early squash, early and second early beans, and tomato and sweet potato plants about the 10th or 15th. Begin planting cotton April 10th.

MAY—Melons, cucumbers, lima beans and pole beans, pumpkins, squash, blackeyed peas and okra should be planted. Plant cowpeas and peanuts. Set out tomato and sweet potato plants. Plant more beans, peas, lettuce, radish, mustard and corn. Sow seed of late cabbage in beds. Finish planting cotton last of the month.

JUNE—Finish putting out plants for regular summer and fall crops. Plant late cabbage seed in hills in the field. Melons, cucumbers, squash and pumpkins should be planted now, also milo, corn, cowpeas, millet, cane and kafir. Plant Mexican beans.

JULY—Plant pole and corn field beans. Make your last planting of corn, kafir, cane, milo. Set out celery and cabbage plants. Sow turnips and rutabaga for fall and winter use. Plant cucumbers for pickling.

AUGUST—Plant beans for late fall use and a few cucumbers for pickling. Finish planting celery early in the month. Sow more turnips. Plant early cabbage for fall and winter use. Plant cucumbers for pickling.

SEPTEMBER—Prepare for late fall and early winter by planting beets, corn salad, kale, lettuce, mustard and spinach. Sow onion seed for winter and spring transplanting.

OCTOBER—Finish up the planting of last month and add mustard, lettuce and spinach for early spring. Plant winter radishes and onion sets.

NOVEMBER—Finish harvesting crops and prepare for winter.

DECEMBER—Foot up profits and losses and send to us for next season's catalog.

The above is not for the professional gardener. He knows more about it than we do, but we are often asked about these matters, therefore we have done our best and hope some one will be benefited.

Few changes have been made in the above since it was written

CELERY

Celery growing is a trade of its own. No one should attempt to grow celery on a large scale until they have had experience with small planting. Sow seed in April, in beds in open field. Plants should be ready to set in July. Celery must be banked to bleach and this should be done with great care to prevent rust or rot. Seed are very slow to germinate, sometimes requiring three weeks. One ounce will produce about 3000 plants.

WHITE PLUME. Early variety, easily grown.

Pkt. 5c; $\frac{1}{2}$ oz 15c; oz 25c; $\frac{1}{4}$ lb 80c; lb 2.50

GOLDEN SELF BLANCHING. A very fine second early variety.

Pkt. 5c; $\frac{1}{2}$ oz 25c; oz 50c; $\frac{1}{4}$ lb 1.75; lb 6.00

EASY BLANCHING. The best for general crop. Extra fine quality.

Pkt. 20c; oz 2.00; $\frac{1}{4}$ lb 7.50; lb 24.00

GIANT PASCAL. A very late variety, hard to grow, but fine quality.

Pkt. 5c; $\frac{1}{2}$ oz 15c; oz 25c; $\frac{1}{4}$ lb 20c; lb 2.50

CUCUMBERS

Plant in hill 4 feet each way. Wait until warm weather as seed will rot in the ground if planted too early. Plant in July for late pickling. One ounce to 50 hills.

DAVIS PERFECT. A very fine early variety.

Pkt. 5c; $\frac{1}{2}$ oz 10c; oz 15c; $\frac{1}{4}$ lb 40c; lb 1.00

CHICAGO PICKLING. Small variety, good for pickling.

Pkt. 5c; $\frac{1}{2}$ oz 10c; oz 15c; $\frac{1}{4}$ lb 40c; lb 1.00

WHITE SPINE. A light colored variety, fine for slicing.

Pkt 5c; $\frac{1}{2}$ oz 10c; oz 15c; $\frac{1}{4}$ lb 40c; lb 1.00

ONIONS

Onions may be planted in three ways:

Sow seed in the open in September, transplant in February and March.

Sow seeds in hot beds in January, transplant in March and April.

Sow seed in field where they want to stand in February, thin to a stand when about half the size of a pencil.

All of the above methods are good, each has its own advantages.

Onions should be planted in rows 12 to 18 inches apart, 4 to 6 inches in the rows.

One pound will produce enough plants for an acre, use two pounds when drilled in the field.

DENIA. This is the best variety for the Pecos Valley. Early, heavy yielder. Bulbs weighing 1 pound are the average, 2 pounds not unusual. Very mild. Always good sale for Denia Onions.

BLOOMSDALE. A good variety for Spring planting, does not stand the winter if planted in the fall.

Pkt 5c; oz 10c; $\frac{1}{4}$ lb 20c; lb 45c.

VIROFLAY. Best for fall planting, stands cold weather well.

Pkt 5c; oz 10c; $\frac{1}{4}$ lb 20c; lb 45c

TOMATOES

Seed may be sown in hot beds and plants reset in the field after danger of frost, but many growers prefer waiting until warmer weather and planting in the open, thinning to a stand as the plants grow. Most varieties should be set 4 feet apart each way, but the dwarf or tree varieties may be set closer, about 2 feet in the row and rows $3\frac{1}{2}$ feet apart. One ounce produces 2000 plants.

STONE. If you are in doubt what variety to plant, plant Stone. A fine, large red tomato. A little late, but stands well. The very best shipper.

FIELD SEEDS

At the time we must print this catalog we can not give prices on Field Seeds, therefore we will issue a price list in February which will be mailed on application. We give a list and short description of varieties generally carried in stock. Be sure to send for the February list if interested.

CORN

We handle native grown seed corn as far as possible as we know it is better for this locality than seed brought from other states. However some varieties can not be obtained locally, these we buy where we can get the best seed.

MEXICAN JUNE. The best variety for the Pecos Valley. Stalks grow large and strong. Ears large, generally two on a stalk. Grain is white with a sprinkling of blue. The best variety for ensilage. A good drouth resister. Not bothered by worms.

HICKORY KING. Large grain, small cob, short stalk. A good producer, but bothered by worms more than other varieties.

BLOODY BUTCHER. Large ears, deep red grains. Heavy yielder. Does well in the valley, also in the mountains.

YELLOW DENT. The best yellow variety. A good yielder, not bothered much by worms.

WHITE PEARL. A favorite with gardeners for selling green. Large white ears.

POP CORN. White Rice, Pearl, Queen's Golden, Japanese Hulless. Yellow Mushroom.

SURE CROPPER. Medium size ears, short stalks. Good for selling green. This is a very fine all purpose corn.

WHEAT

TURKEY RED. This is the best variety for fall planting. Millers prefer this for their best flour.

MARQUIS. Best spring variety. Yields well, almost as good as Turkey Red for milling.

OATS

RED RUST PROOF. This is the only variety to plant in the Valley. Good for either fall or spring planting. Do not consider anything else.

BARLEY

Barley is used for green pastures as well as grain. Plant either spring or fall. Very hardy, will grow where other grains fail.

RYE

Fine for winter pasture, stands cold well. A good soiling crop.

PEANUTS

The Tennessee Red has proved to be the best variety for this locality.

COTTON

FERGUSON'S ACALA

This has proved to be the best cotton seed for planting in this locality. The seed we offer was grown by the Pecos Valley Pedigreed Seed Co., of Loving, N. M.

SEE FEB. FIELD SEED LIST FOR PRICES.

DROUTH RESISTING CROPS

These grains will grow and mature where corn will fail for lack of moisture.

WHITE KAFIR. Makes a good yield of very fine grain which is good feed for all kinds of stock. Especially good chicken feed.

BIRD PROOF MAIZE. Resembles Dwarf Milo except heads are straight. Grain dark red. Not bothered by birds.

DWARF MILO. Grain a light red. Larger than Kafir. The best drouth resister of all.

FETERITA. A soft, white grain. Earlier than Maize, but shatters more easily.

CANE

BLACK AMBER CANE. A good early variety, grown chiefly for the fodder.

SUMAC CANE. A very fine cane, a little later than Amber, but a heavier yielder. Our best seller.

SEEDED RIBBON CANE. Used principally for making syrup. Large stalks, very sweet, heavy yielder.

CLOVER AND GRASSES

ALFALFA. The great hay plant. One of the main crops of the Pecos Valley. Sow in spring or fall. Generally sown with Oats, Wheat, Rye or Barley for a protection.

SWEET CLOVER. Two varieties, White and Yellow Blossom. The White is most generally used. Grown mostly for bees. Makes a fine white honey. Bi-ennial.

WHITE CLOVER. Used for lawns, pastures and for bees. See Page 10.

KENTUCKY BLUE GRASS. Used in this locality chiefly as a lawn grass, for which purpose it is excellent. Sow any time in the year but does best in the fall or early spring. See Page 10.

BERMUDA GRASS. Fine for lawns, also pasture. Frost kills the top, but the roots live over winter in this climate. Further north the winter kills it, but in the Pecos Valley it never dies. Therefore do not plant it where you expect to cultivate afterwards, for it will always be there. Chokes out all other plants. Propagates from roots and seed. See Page 10.

SUDAN GRASS. A large coarse grass which makes fine pasture and hay. Grows with the least moisture of anything of its kind. While it resembles Johnson Grass it is an annual crop and does not live over winter. A fine dry land forage crop.

JOHNSON GRASS. Generally regarded as a pest. Do not plant where you ever expect to cultivate for it will certainly be there always. A good grass to plant on waste land that cannot be cultivated. Propagates from root and seed.

ENGLISH RYE GRASS. Very much like Blue Grass except larger and coarser. Good for lawns if kept mowed. Fine for pasture. See Page 10.

MILLET. A good hay crop if cut before seed is ripe.
